

PRIMUS BROADBAND SOLUTIONS

When your survival depends on being able to provide simple and cost-effective solutions, Primus can help.

As your customers explore new ways to improve their telecommunications capabilities while reducing costs, your survival depends on being able to provide simple and cost-effective solutions, like the ones Primus provides with its Broadband offerings.

Primus Global ATM

Asynchronous Transfer Mode, better known as ATM, is designed to provide your customers with a flexible and cost-effective, but high-quality, alternative to private lines for data networking. Primus Global ATM allows users to access our network at various nodes around the world, enabling

customers to send voice, data and video over the same network at less than the cost of buying or leasing private lines.

Primus owns and operates one of the fastest, most reliable ATM + IP backbones in the industry. Primus' network uses advanced structured cabling, diverse fiber, meshed network architecture, carrier-grade equipment and power backups to ensure maximum availability and speed for your critical data applications.

Primus Global ATM offers access speeds at T-1 / E-1, DS-3 and OC-3 / STM-1 levels. Global ATM features Permanent Virtual Circuits (PVC) available at either Constant Bit Rate (CBR) or Variable Bit Rate-Real Time (VBRrt) service levels.

The CBR service is used by connections that require a static amount of bandwidth; it's intended for real-time applications such as voice and video.

The VBRrt service is intended for "bursty" applications, such as large file transfers like CAD files or LAN-based data back-ups.

Primus Private Line Services

When quality and availability of service are key, Primus Private Line Services meet your customers needs for a sophisticated point-to-point solution. The Primus network – covering Europe, North America and Asia-Pacific – can provide managed bandwidth to meet any of your customers' expectations.

Primus:
More
than
just
talk.™

Designed to provide global customers with high-quality, high-availability managed bandwidth circuits, Primus' International Private Lines are available with one, two or three-year leases at E-1 / T-1, DS-3 and OC-3 speeds.

Primus Private Line Services feature point-to-point "Clear Channel" circuits and fixed, guaranteed bandwidth that is "protocol transparent," meaning your customers can run the services of their own choosing without service-provider limitations.

Primus is:

- ◆ Integrated total service provider with more than \$1.2B in annualized revenue and over two million customers
- ◆ Facilities-based provider with assets on four continents
- ◆ Global carrier with ownership interests in more than 25 fiber-optic cable systems

For more information on a Primus Broadband Solution that fits your needs, please contact your Primus Carrier Services representative or see Primus' corporate Web site.
