

DEDICATED INTERNET ACCESS

Solutions to meet the varied access needs of Internet and online service providers.

Primus Wholesale Dedicated Internet Access offers solutions to meet the varied access needs of global Internet and online service providers.

Primus' ATM + IP network features industry-leading equipment by Lucent Technologies, Cisco Systems and Hewlett Packard. Along with that, Primus has more than 200 public and private peering agreements worldwide and Internet transit from Tier 1 carriers in Europe, North America and Asia-Pacific. All of this provides you with solutions to meet your complete Internet access needs.

Primus' Wholesale Dedicated Internet Access features flat-rate billing for fixed access bandwidth. Static and BGP4 routing options are available at T-1 / E-1, DS-3 and OC-3 / STM-1 speeds. Plus, Primus' Wholesale Dedicated Internet Access offers DNS (name server) mirror, outgoing Mail Relay and Newsfeeds.

Why Primus Is More Than Just Talk

Primus Telecommunications has built the next-generation application infrastructure to support business-critical Internet and e-Commerce applications. Primus' end-to-end service-delivery capabilities are centered on the **Primus Global Application-Intelligent Network (GAIN)**. The Primus GAIN moves far beyond traditional data networking by combining the Primus Global ATM + IP network, Application Centers, Application Accelerators, Application Management capabilities and Application Services into a cohesive, globally enhanced application delivery *platform*.

Worldwide intelligent ATM + IP backbone.

Primus owns and operates one of the fastest, most reliable ATM + IP backbones in the industry. Primus' POPs use advanced structured cabling, diverse fiber, a meshed network architecture, carrier-grade equipment and power backups to

ensure maximum availability and speed of IP traffic. By design, the network is redundant in architecture so that it can operate in the rare event that part of the system becomes damaged or disconnected.

24x7x365 network monitoring. The Primus Network Operations Center is staffed by trained, certified technicians who proactively troubleshoot and monitor the Primus ATM + IP backbone and all customer access circuits.

Mail Relay. Primus can store up to five days of mail to ensure that valuable messages are not lost should a company's e-mail server malfunction.

Domain Name Service. Primus provides Domain Name Servers (DNS) to advertise domains to the Internet. A secondary DNS acts as a backup to the primary DNS on which the records are stored. Domain Name Service includes the administration and hosting of your customers' domain host records.

Primus is:

- ◆ Integrated total service provider with more than \$1.2B in annualized revenue and over two million customers
- ◆ Facilities-based provider with assets on four continents
- ◆ Global carrier with ownership interests in more than 25 fiber-optic cable systems
